

ERECTION SERVICES

Specializing in erection and sheeting of pre-engineered and conventional buildings from 50,000 to 1,700,000 square feet

BlueScope Erection Services (BES) is a highly qualified team that travels the United States specializing in the erection and sheeting of pre-engineered metal buildings (PEB) and conventional structures ranging in size from 50,000 to 1.7 million square feet.

The JCB manufacturing facility for heavy industrial equipment features forty 50'x140' bays erected by BES. Twenty of the bays were ground assembled—including the decking and 3-3/4" Thermax—and then lifted onto the columns.

BES provided all erection and sheeting of this 770,000 square foot steel processing facility and was a major contributor to the project being completed 10 months early and under budget.

The 519,200 square foot expansion to this existing warehouse was erected and sheeted by BES in just 74 working days.
